Sullair Corporation Releases Video for New 3700 Compressor

(Michigan City, IN, April 1, 2006) – Sullair Corporation has released a video that describes the design and development process for its newest point-of-use compressor, the Sullair 3700.

The video explains how Sullair designed the 3700 Series compressors to answer end users' and maintenance workers' demand for a product that is more compact, energy efficient, serviceable, powerful—and yet quieter—than available 50 horsepower compressors.

With the new compressor, Sullair has made service and routine maintenance faster, simpler, and more efficient. The 3700 video thoroughly outlines how the compressor's serviceability was engineered to minimize production downtime and create a cleaner, safer work environment. It also describes the new microprocessor technology and how the 3700 series compressor can deliver energy and cost savings.

The Sullair 3700 video is available by contacting Sullair at (800) SULLAIR or by logging on to www.sullair3700.com.

ABOUT SULLAIR CORPORATION

Sullair is one of the world's leading compressor manufacturers, and is the only air compressor manufacturer to concentrate exclusively on rotary screw technology. Sullair is a company of Hamilton Sundstrand, which is a division of the United Technologies Corporation. Sullair has been an industry leader and innovator since 1965. With subsidiaries in France, China, and Australia, Sullair is also a globally recognized manufacturer of compressed air contaminant removal equipment, vacuum systems, and contractors' air tools.
