

## **Sullair's 375 iT4 Family of Portable Compressors Features Lowest Engine Emission Technology and Proven Dependability**

MICHIGAN CITY, IN March 2013—Sullair announces the availability of its 375 iT4 family of portable air compressors that has been redesigned to meet iT4 regulatory requirements. These dependable rotary screw air compressors provide clean, dry compressed air for construction sites, including mines, quarries, bridges and roads. With optional after-cooler and filtration, they can also be used as a convenient on-site source of instrument quality supplemental, replacement or emergency plant air for instrumentation, process equipment and other industrial applications.

Available with a choice of Caterpillar or John Deere 4-cylinder diesel engine, the Sullair 375 iT4 family includes six models ranging from 300 to 425 acfm at operating pressures up to 200 psig. They are among Sullair's wide range of over 90 portable compressor models with capacities from 100 to 1600 acfm, and pressures from 100 to 500 psig.

As part of Sullair's on-going commitment to help protect the environment, the redesigned 375 iT4 family of compressors features several enhancements to meet iT4 requirements. These models have the lowest emissions technology available to reduce environmental pollutants. They also provide quiet operation by meeting US EPA sound requirements of 76 dBA @ 7 meters and are equipped with a full fluid containment retention frame to protect against accidental spills.

Other outstanding features of the Sullair 375 iT4 family of compressors include an improved diagnostic electronic control system with a text display of the run condition and fault codes explanations. The large, padlockable service doors with gas assist springs provide easy access to the fuel tank, engine, air filters and tool compartment. All packages include two-stage dry-type intake filters, 0 to 100% capacity control, a single-point lifting system and optional fork lift pockets. Sullair 375 iT4 compressors can be ordered with heavy-duty highway towable running gear or without running gear. Compressors are factory-filled with Sullair's AWF compressor fluid, a specially formulated all weather fluid for Sullair portable compressors that with recommended service carries a 5-year air end warranty.

Sullair is recognized worldwide for their portable air compressors, stationary air compressors, compressed air treatment equipment, contractor's air tools, and vacuum systems.
