

FOR IMMEDIATE RELEASE:

Sullair's REMAN Program makes it Easy and Affordable for Customers to Replace Portable Air Compressors

Sullair Announces Nation-Wide Rollout of the REMAN Program at the Offshore Technology Conference 2014 in Houston, Texas

Houston Texas – Offshore Technology Conference 2014, May 7, 2014 – [Sullair](#), an industry leader on the forefront of innovative compressed air solutions since 1965, today announced the nation-wide availability of its "REMAN" factory authorized remanufacturing program for Sullair 1600H AF and 900/1150X HH portable air compressors.

Unlike a refurbishing program in which selected parts are repaired or replaced once they become unusable, the Sullair REMAN program provides a replacement for T2/T3 air compressors with a fully remanufactured Sullair air compressor that features the same factory warranty as a new unit. Once an exchange takes place, Sullair fully disassembles the used air compressor core and inspects, cleans and services all of its components. Only Genuine OEM parts are used in the process. Extensive testing is conducted, to ensure that the remanufactured unit meets the original specifications.

Sullair initiated this program on a limited basis late last year with the 1600H AF portable compressor. Today, the program is being rolled out on a nation-wide basis, and expanded to include the 900/1150X HH portable air compressor.

"The early customers that have taken advantage of the REMAN program describe it as a win-win, because not only do they end up with a like-new air compressor and a same-as-new warranty, but they receive it quickly, which minimizes disruption to their work schedules," states Rebecca O'Mara, Senior Director of Business Development for Sullair. "The program has been so successful that we're now able to offer REMAN on a nation-wide basis."

Customers wanting to avoid the hassle of selling their old equipment, or hoping to extend the life of their rental fleets should contact Sullair to find out more about the REMAN program.

This week at [OTC 2014](#), Sullair is also discussing how manufacturers of drilling equipment are embedding Sullair compressors into water well, geothermal, oil and natural gas drilling applications. To learn more, visit Sullair in booth #2765.

About Sullair:

Sullair is globally recognized as a leading manufacturer of portable air power compressors, contractors' air tools, stationary air power compressors, compressed air treatment equipment and vacuum systems. Sullair is located at 3700 East Michigan Boulevard, Michigan City, IN 46360. Telephone 219.879.5451. FAX 860.353.5779. Website: www.sullair.com.
