Sullair Announces Two Updated Tier 4 Final Compliant Portable Air Compressors

CHICAGO – Feb. 22, 2016 – Sullair, an industry leader in innovative compressed air solutions since 1965, today announced the availability of two updated Tier 4 Final emissions compliant portable air compressors. The Sullair 185 T4F is in full production and ready to order, and the company is currently taking preorders for the Sullair 375 T4F. The reimagined models offer the durability for which Sullair is known, but in a more compact and user-friendly design that meets the latest government regulations.

Over the past year, Sullair has put the 185 T4F through rigorous in-field testing and internal evaluation to ensure the final model meets the highest of standards. The new, compact design includes an updated air end, proven engine that only requires diesel, better fuel efficiency and several components that improve serviceability.

The improved 375 T4F air compressor offers a more compact design, better serviceability, and a higher range of pressure (375 to 425 cfm air flow and 100 to 200 psi), allowing for more flexibility on job sites. It also features the legendary Sullair air end and a larger fuel tank for longer, uninterrupted usage.

“We listened to our customers’ wants and needs, incorporating a variety of valued feedback into the new design,” said Stefan Brosick, vice president of marketing and sales for Sullair. “It’s the details that matter—and we analyzed every part of these machines to make them stand out as the best in the industry.”

To learn more about the new models, customers should contact their local Sullair distributor.

About Sullair

Since 1965, Sullair has developed and manufactured air compressors with proven reliability and wear-free durability. Sullair is globally recognized as a leading manufacturer of portable air compressors, contractors’ air tools, stationary air compressors, compressed air treatment equipment and vacuum systems. Additionally, Sullair provides customers with a full line of aftermarket parts, fluids and services. Sullair has manufacturing capabilities in Michigan City, Indiana; Shenzhen and Suzhou, China; Mahindra World City, India; as well as a JV (IHI-Sullair) based in Suzhou. For more information, visit www.sullair.com.

About Accudyne

Accudyne Industries is the parent company of Sullair, and a global provider of precision-engineered, process-critical and technologically advanced flow control systems and industrial compressors that deliver consistently high performance and give confidence to the mission of its customers in the most

important industries and harshest environments around the world. Today, Accudyne is powered by ~3,000 employees at 15 manufacturing facilities, supporting a broad range of industries in more than 150 countries. For more information, visit www.accudyneindustries.com.
