

SULLAIR SKI REPORT: TERRY PEAK. DEPENDABLE SNOW ALL SEASON

Terry Peak Ski Area in South Dakota's Black Hills is white with snow all season long, thanks to its snowmakers—and its new Sullair tandem compressors.

With 10 of its 20 miles of ski trails covered by snowmaking equipment, Terry Peak needed a compressor system it could count on. Based on the dependable performance of their 100 hp Sullair compressor Terry Peak again chose Sullair.

The three new compressors are Sullair Series 32/25, 600 hp, two-stage units. Each delivers 2,600 acfm at 150 psig, giving Terry Peak a total capacity of 7800 cfm. The tandem's full load performance is 15 to 17 percent more efficient than a single-stage compressor at this pressure. The tandem's dual capacity control system offers high efficiency at partial loads as well. This high pressure system operates at 150 psig—50 psig higher than standard—to further increase its efficiency.

Terry Peak's Sullair system also includes remote air cooled cooling packages with air-cooled aftercoolers that do the job without using water or expensive water-glycol recirculating systems.

Sullair compressor systems. They're efficient, reliable and cost effective. Is it any wonder that more than 20 major ski resorts have specified Sullair for their snowmaking?

Sullair's full line of rotary screw compressors to 3,100 acfm, offers the flexibility to meet your requirements in air- or water-cooled systems, electric or diesel engine drives, multiple machine controls, heat recovery and efficient high pressure systems.

When you want to report "Snow All Season," contact Sullair Corporation, 3700 East Michigan Boulevard, Michigan City, IN 46360. Phone: 1-800-SULLAIR or 219-279-5451.
